

Case Study

PROJECT NAME: BLOOD HILLS

PROJECT TYPE: WIND FARM

PROJECT SIZE: 800 KW

CLIENT: FARM ENERGY PARTNERSHIP

DATE: APPROVED MARCH 2014

Neo Environmental were commissioned by Farm Energy Partnership to undertake a comprehensive environmental assessment as part of a planning application for the repowering of a wind farm in Norfolk.

Neo Environmental's involvement:

The project involved the decommissioning and reinstatement of the existing wind farm, which consisted of ten wind turbines, and the installation of two larger more productive ones. Neo Environmental conducted the following assessments for the development:

- LVIA
- Noise Impact Assessment
- Heritage Impact Assessment
- Ecological Appraisal (Including Phase 1 habitat survey)
- Shadow Flicker
- Traffic & Transport Assessment
- Decommissioning & Reinstatement Report

Project Outcomes:

- No significant impacts were identified and the project was consented, subject to a number of conditions.
- The development has been fully constructed and is operational.
